The FNB Horizon Series has been specifically designed to take the complexity out of investing and offer investors superior fund solutions, with exposure to inflation-beating returns over different time horizons. There are five funds to select from; each fund has been designed to optimise returns over a specified time horizon. You can simply select the fund that best matches your investment horizon. Investors benefit from multi-manager funds that offer value for money, managed by the brand that you trust.

Risk objective

This portfolio is diversified across various asset classes. It provides the investor with greater fixed income exposure relative to other asset classes that the fund is exposed to. The fund's exposure to fixed income investments creates sensitivity to changes in bond yields, rising interest rates and inflation uncertainty, as well as exposure to economic, political and credit risk. Investments in equity and property are volatile by nature and are susceptible to changes in general market conditions, as well as economic, political and company specific risks. This fund has a significant exposure to foreign investment funds and is thereby susceptible to currency risk and potential macroeconomic and political risks brought about by funds invested across various regions.

Investment objectives

An outcomes based multi-asset solution, designed to optimise returns and volatility over a 5 year investment horizon. With a return target of CPI +3.5%, in times of market volatility your investment should not experience a drawdown of more than 15% or an annualised volatility of 9%. The solution is compliant with Regulation 28 of the Pension Funds Act.

Investment strategy

Multi-asset strategy, combining passive and active building blocks (funds) using robust portfolio construction methodologies, subject to regulatory constraints, explicitly allocated risk budget (volatility and drawdown) and liquidity considerations. The fund may invest in a diversified mix of assets, including but not limited to: equities, bonds, property, money market instruments, exchange traded funds, and offshore investments. Although the asset allocation will be managed actively, there is an investment risk associated with all asset classes (including, but not limited to market risk, interest rate risk, credit and liquidity risks, with foreign investments in addition being exposed to currency risk).

All performance numbers are net of all fees and expenses. The above is purely for illustrative purposes. The above portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. For reinvesting funds, income is reinvested on reinvestment date. Actual investment performance will differ based on the initial fees applicable, the actual investment date, the date of reinvestment of income and dividend withholding tax. Past performance is not necessarily an indication of future performance.

The above meet the criteria for the display of a statement of changes in the composition of the portfolio.

The fund adhered to the policy objectives as stated in the Supplemental Deed in terms of its allowed investments.

Definitions

Total return:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset.
NAV (net asset value):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.
TER (total expense ratio):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.
Transaction costs:	Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated on an annualised basis. These costs include brokerage, VAT, and trading costs.
Annualised return:	The weighted average compound growth rate over the performance period measured.
Tracking error:	A measure of the amount of risk that is being taken in excess of the benchmark (tracking error is used where applicable).
Total investment charges (TIC):	It is the sum of the Total Expense Ratio (TER) and the Transaction Cost (TC).
Highest & Lowest Return:	The highest and lowest rolling twelve-month performance of the portfolio since inception.
Sharpe Ratio:	The ratio of excess return over the risk-free rate divided by the total volatility of the portfolio.
Sortino Ratio:	The ratio of excess return over the risk-free rate divided by the downside deviation of the portfolio.
Standard Deviation:	The deviation of the return of the portfolio relative to its average.
Drawdown:	The greatest peak to trough loss until a new peak is reached.
Information ratio:	The information ratio measures the risk-adjusted performance of a portfolio relative to a benchmark.

Disclaimer

FNB CIS Manco (RF) (Pty) Ltd (Registration Number 2006/036970/07) ("FNB CIS Manco") is an approved Collective Investment Schemes Manager in terms of the Collective Investment Schemes Control Act, No. 45 of 2002. The FNB CIS Manco is regulated by the Financial Sector Conduct Authority ("the Authority") and is a full member of the Association for Savings and Investment South Africa ("ASISA"). This document and any other information supplied in connection with the FNB CIS Manco is not "advice" as defined and/or contemplated in terms of the Financial Advisory and Intermediary Services Act, 37 of 2002 ("the FAIS Act") and investors are encouraged to obtain their own independent advice prior to buying participatory interests in the collective investments scheme ("CIS") portfolios issued under the FNB CIS Manco. Any investment is speculative and involves significant risks and therefore, prior to investing, investors should fully understand the portfolios and any risks associated with them. Collective Investment schemes in Securities are generally medium to long term investments. If a potential investor requires material risks disclosures for the foreign securities included in a portfolio, the manager will upon request provide such potential investor with a document outlining: potential constraints on liquidity and repatriation of funds; macroeconomic risk; political risk; foreign exchange risk; tax risk; settlement risk; and potential limitations on the availability of market information. The value of participatory interests in collective investment schemes may go down as well as up and past performance is not necessarily a guide to the future. For all portfolios forward pricing is used and portfolio valuations take place at approximately 15h00 each business day (17h00 at month and quarter end) with an exception for Fund of Funds portfolio valuation take place at approximately 17h00 each business day using the underlying funds valuations of the previous day. Instructions to redeem or repurchase must reach the FNB CIS Manco before 14h00 to ensure same day value. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures. In such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. CIS portfolios are traded at ruling prices and can engage in borrowing and scrip lending. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. A CIS portfolio may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Participatory interests in CIS portfolios are calculated on a net asset value (NAV) basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the CIS portfolio divided by the number of participatory interests in issue. All fees quoted exclude VAT except where stated differently. The Total Expense Ratio (TER) is expressed as an annualised percentage of the charges, levies and fees incurred by the portfolio related to its management, for the period under review against the average NAV of the portfolio over this period. A higher TER does not necessarily imply a poor return, nor does a lower TER imply a good return. The current TER cannot be regarded as an indication of future TERs. A full detailed schedule of fees, charges and commissions is available from the FNB CIS Manco on request and incentives may be paid and if so, would be included in the overall costs. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The manager has a right to close the portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate. A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure. Additional information about this product, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge, and from the website: www.fnb.co.za. Ashburton Fund Managers (Pty) Ltd is an authorised Financial Services Provider.
